Categories \*

- Solo F
- Solo M
- Team of 2 open
- Team of 2 coed

The screenshot shows the Raid Pulse mobile app interface. A blue arrow points to the 'Nom' field, which contains the text 'Raid Pulse'. Below this field are several other buttons: 'Événements à proximité', 'Choisir un événement', 'Options et paramètres', 'Aller au Départ', and 'Résultats'. At the bottom right, there is a green circular button with a white hamburger menu icon.

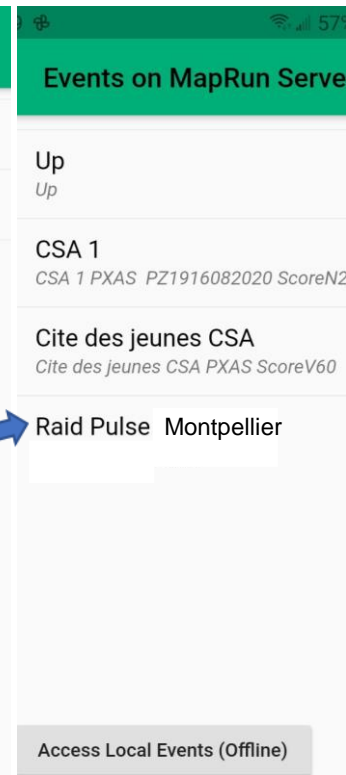

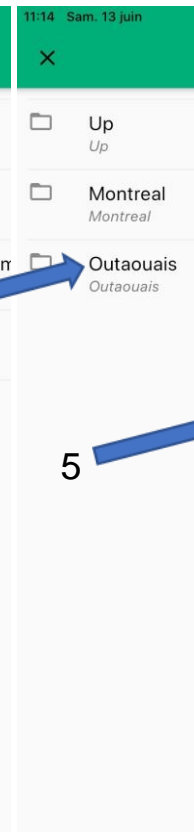

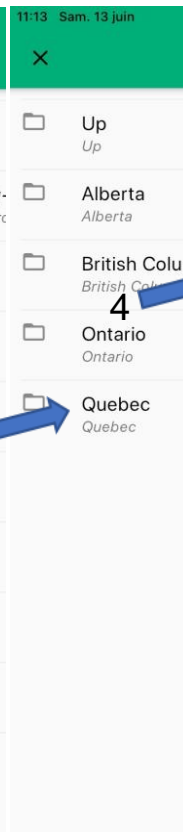

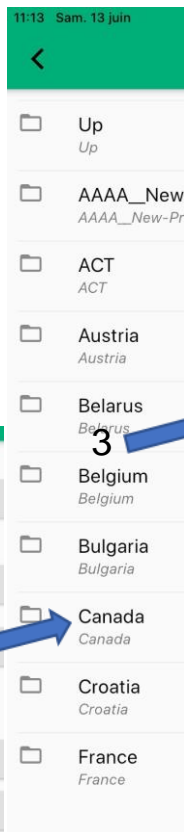

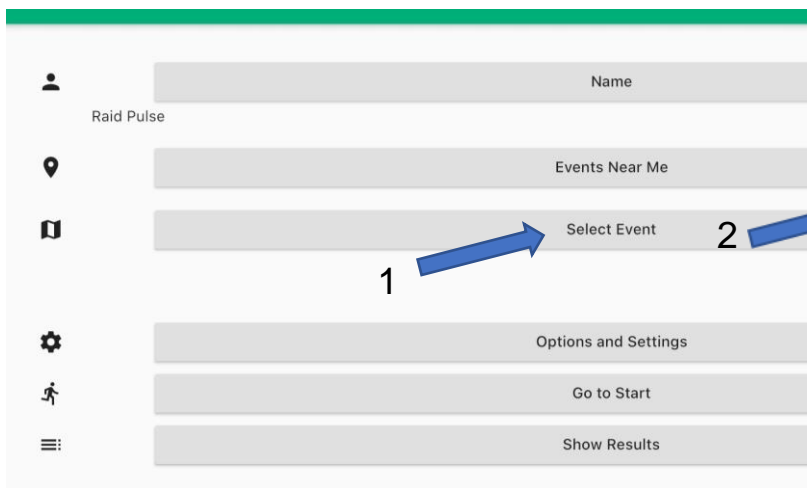

You can now test the app by selecting an event that already exists in your area. You can also create an event for testing...

Follow this link for more information on how the app works.

<http://maprunners.weebly.com/quick-guide.html>

Before departure, you will need to select the event.

From the home page, Follow these steps.

Here are the names of the two events that will appear in the Raid Pulse Montpellier folder at least two days prior to event (you need internet data to load the event):

Raid Pulse 3h 2024

Raid Pulse 8h 2024

\* Make sure you select the correct event.

Once selected, you must wait until you are at the start area (pink triangle) before clicking on “Go to Start”. Make sure you’re on time because we’re going to make a mass start (You will not need internet data for this stage).

During the event the app does not require internet data, it will simply use your phone's GPS system. You will however need internet data to load the event into the app before the start and also to upload your result after crossing the finish line. There will be a Wifi network at the headquarters and you will have access to it.

Wifi info will be available at race headquarters.

During the event it will be important to keep your phone on the surface, for example: you could use an armband (on your arm) to carry the phone or carry it in a pocket on the top of your bag. When you are in the forest, especially during trekking, you should hold the phone in your hands.

If your phone is in the bottom of your bag, the quality of the GPS signal may be affected which will prevent the app from working properly. In case the application does not work (for X reason), there will be a QR code on each tag that you can scan with your phone.

When you get to a control, the app will vibrate and make a sound which will confirm your passage. The app is programmed to pick up your passage within a 15-meter radius, so the app may detect your presence before actually getting to the control. You will still have to go there to punch on your passport (mandatory) which will validate your passage. This means that even if you have the control with the app, you still have to go to the control to punch. \* If you are at the control and the app does not beep, the tracking will show that you have indeed been there. Punch and continue your race.

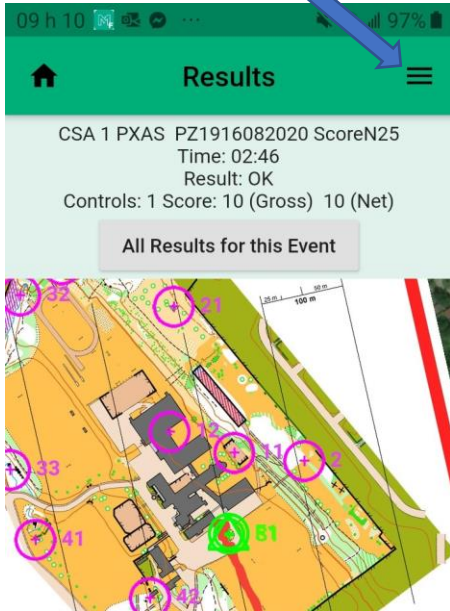

Example of control and punch:

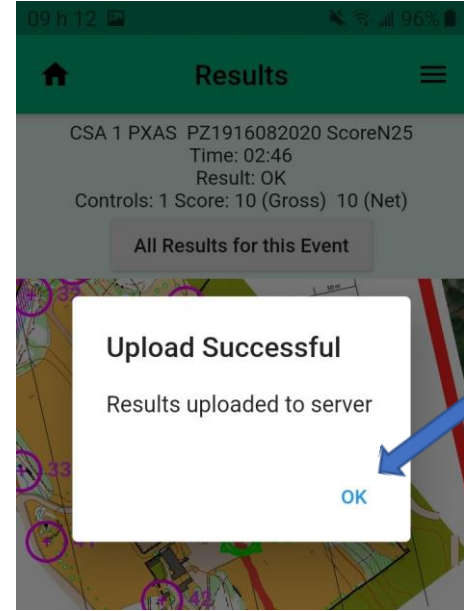

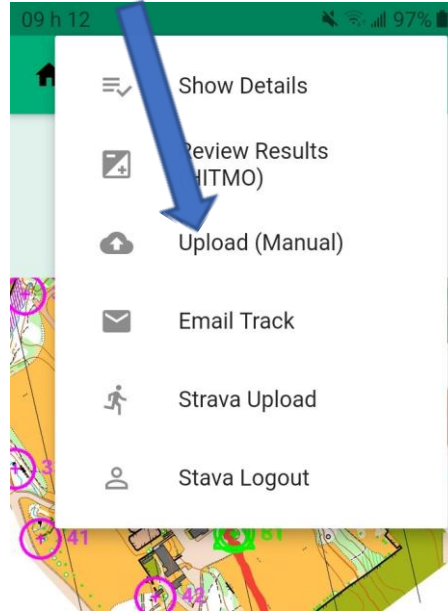

After the event, when you have crossed the finish line you must go to the WiFi area (outside very close to the finish line) to upload your results.

\* DO NOT CLOSE THE APP OR EXIT THE EVENT UNTIL YOU HAVE UPLOADED YOUR RACE.
